For Immediate Release

Analog Way announces new Orchestra² Remote Controller

April 2014 – Analog Way is pleased to announce Orchestra², a revamped and improved new Remote Console designed to control a wide selection of Analog Way's mid-range Mixers / Seamless Switchers.

After the successful release of the **Orchestra** Controller in 2009, **Analog Way** is pleased to introduce **Orchestra²**, a revamped version of the Remote Console.

Orchestra² (Ref. ORC50) allows control of several generations of **Analog Way's** switchers, including the **Di-VentiX II, Eikos, Pulse** as well as the new **Midra™** series such as the **Saphyr, Pulse²** and **QuickVu**. In total, the **Orchestra²** is compatible with 16 Switchers from **Analog Way**.

Orchestra² can manage, independently or simultaneously, several Switchers, either as stand-alone boxes or in combination, including Soft Edge Blending. It controls up to 6 independent screen configurations in different locations and stores up to 64 presets per screen configuration.

The Console comes with a new design and a Quick Frame button was added to control the **Midra™** series. **Orchestra²** features off-line programming enabling programming of the Console when Seamless Switchers are not connected. In addition, the Remote Console features the new Snap function, a powerful tool to help quickly position layers.

Its numerous user-friendly, customizable and configurable presets enable the set-up of the screen configuration, so that they are easily accessible during the presentation. A last minute modification is easy thanks to the direct input/output selection access.

Also equipped with a USB port, the complete configuration of the event can be saved both internally and externally for future use.

Analog Way will start shipping the **Orchestra²** in May 2014.

Orchestra and **Axion2** owners will be able to download the new firmware on **Analog Way's** website ensuring compatibility with the **Midra™** series. The Quick Frame key will be available upon request by contacting **Analog Way's** Technical Support teams.

Analog Way, Pioneer in Analog, Leader in Digital

Analog Way is a leading designer and manufacturer of presentation switchers and image converters with worldwide locations. The company designs a wide range of computer to video scan converters, scalars, seamless switchers and up/down converters. The products provide the most advanced solutions in the Broadcast, AV, Rental & Staging, Church, Corporate and Industrial markets.
