How to cable the link in Additive modularity

For even more impressive presentations, 2 units of **SmartMatriX Ultra**, **Ascender 32** or **Ascender 48** can be linked together. In this configuration, inputs and outputs are shared and added resulting in impressive 24x8 scaled Seamless Matrix systems + 2 Mosaic Previews. The cabling is critical here. It is necessary to strictly respect the cabling below between the two devices.

Please refer to the User Manual of your Switcher for further details about the settings.
